With a clear vision for the future!

Today SIKO can look back over five decades of experience in the production of measuring instruments for length, angle and speed measurement as well as the measurement of tilt angles and speed. With these core competencies as its foundation, SIKO develops and produces measuring instruments and positioning systems for automation and manufacturing processes that are geared to the future.

The highest demands of our customers from the industry and the mechanical engineering sector are more than met by the quality, precision and functionality of our products and services.

SIKO is certified to DIN EN ISO 9001 : 2008. In our company sustainable use of resources is a matter of course.

Six product ranges - a wide portfolio for very different measuring assignments

The SIKO product portfolio comprises a total of six ranges, including high-quality measuring instruments and positioning systems for the industry and the mechanical engineering sector.

We develop sensor systems for measured value acquisition either for you or in collaboration with your company. Shorter tooling times and the optimization of manufacturing and production processes are often the centre of focus.

OEM customers, projects and special solutions, retrofits or spare parts supplies directly to end users - all our customers are important!

6 distinctive product lines

PositionLine	mechanical and electronic position indicators, handwheels with analog displays, adjustment buttons
RotoLine	magnetic and optical rotary encoders, geared potentiometers
LinearLine	wire-actuated encoders, optical distance sensors
DriveLine	actuators
MagLine	magnetic length and angle measuring systems
OptoLine	high-precision optical sensors

3.1

Global success is never coincidental

Today the robust and innovative SIKO measuring instruments are in use in industrial and mechanical engineering installations around the world.

Five SIKO subsidiaries are at your disposal in the following countries:

- U.S.A.
- Italy
- Switzerland
- China
- Singapore

In addition, around 60 national and international agencies are on the spot for direct customer contact and technical support. Sales engineers and service technicians support OEM customers as well as users at their own facilities, providing competent advice and services in the respective national languages.

Horst Wandres & Sven Wischnewski | Management of SIKO GmbH

Rotary encoders made by SIKO are optimally suited to wire-actuated technology. Custom-specific encoders can also be mounted thanks to standardized mechanical "interfaces".

The most flexible solution when the direct route goes round the corner

SIKO wire-actuated encoders are a perfect measurement solution thanks to their state-of-the-art, fail-safe technology and effortless integration. They are suitable for a wide range of measurement tasks under very varied conditions. Their sturdy design and wire types guarantee an exceptionally long, maintenance-free service life.

This is how the technology works

A single layer of measurement wire is wound onto an internal drum [1]. When the wire is pulled out [2], it causes the drum to rotate. The angle sensor [3] connected directly to the drum axle records this rotation and generates an arbitrarily usable measurement signal proportional to the wire movement. An integral coil spring [4] on the drum's rotation axis guarantees a safe wire return movement (see illustration). Mounting effort is low, as the wire is simply attached to the object to be measured. This means there is no need of additional guiding systems or installation of energy supply chains.

Moreover, the flexibility of the wire enables linear adjustments even at sites which are hard to reach. Indirect paths can also be measured by means of guide rollers.

A choice of incremental and absolute measuring principles is generally available. SIKO wire-actuated encoders cover almost the entire range of industrial applications - from compact versions in miniature format with a measurement length of 600 mm to solutions with wire pull-out lengths of 15 m.

Benefits

- Long service life thanks to consistent technological development and application-oriented choice of materials
- Excellent price-performance ratio
- Variable measurement lengths
- Easy adaptation of measuring transducers
- Standardized interfaces
- Problem-free, fast mounting

Areas of application

Measurement systems based on the “draw-wire” principle are easy to handle, since attaching the wire to the adjustment unit is quick and inexpensive.

They also run reliably without additional mechanical protection, for example on elevating work platforms or forklift trucks. While during metal processing the dimension of the workpiece is measured with a wire cable when adjusting the end stop of mitre saws, wire cables are used for all measuring tasks in the illustrated material handling example.

SIKO's miniature encoders are the logical answer to ongoing integration in industrial products and processes. The tiny encoders have a wide range of application: They are reliable monitors of positioning tasks for patient tables (medical technology), adjustment of seats (vehicle technology) or controlled deflection of chassis (aircraft technology).

With the SG120 and the SG150 for measuring distances of up to 15 metres, solutions in the work platform, warehouse and crane sectors have been implemented.

5

[1] Retrofitting with a wire-actuated encoder permits direct control of a set value for height and stroke. [2] Positioning of patient tables, for example on tomography systems, operating tables and X-ray equipment. [3, 4] Finding the correct placement area is decisive for a smooth workflow: Wire-actuated encoders are reliable measuring elements for the assignment of pre-defined storage areas. [5] For height adjustment and side positioning of the lifting fork of unmanned transport systems. [6] Reliable recording of the support and the telescopic cylinder for monitoring the maximum range with wire-actuated encoders, optionally of redundant design.

Measurement range and wire versions

Various measurement lengths and wire types are available depending on the measurement range requirements and the ambient conditions. The following table is a guide to selecting the right components (wire) when planning a linear wire measurement system..

Wire versions		Properties compared		
Type	Material	Tensile strength	Sliding properties	Measuring accuracy
S	stainless steel	•	•	•••
SK	plastic-coated steel	••	••	••
P	electric paraline non-conducting, signal color	•••	•••	•

3.2

Mounting note

When attaching the wire it should be pulled out straight in line with the wire outlet.

Recommendation: A 5 mm wire extension is recommended before the measurement starting point. This prevents the wire snapping back to the stop on rewinding.

Symbolic representation

Mounting example

Guide rollers are used wherever the wire-actuated encoder cannot be installed in line with the extension direction of the wire. Several rollers can be used to redirect the wire without influencing the measurement result.

An opening slightly larger than the diameter of the wire is sufficient as a point of access at measurement sites which are hard to reach. A protective cover is recommended for use in soiled environments. Note: Mechanical stress shortens the lifespan of the wire.

A wire extension piece can be used for applications where the distance between the wire-actuated encoder and the measurement range is greater than the wire's maximum extension length. This does not extend the actual measurement range, however (see above: mounting note). This simple method is useful for measurements in areas where a sufficiently large distance is required between the wire-actuated encoder and the measured object due to high temperatures, harsh environments, measurement in liquid media, areas which are difficult to access, etc.

Detailed information on guide rollers or wire extension pieces can be found on the product page in the accessories section.

3.2

Customer-specific encoders

All rotary encoders with the following specifications can be installed on the SG31, SG60, SG120 und SG150 wire-actuators (see diagram):

- 58 mm servo/synchro flange
 - 6, 8 and 10 mm solid shaft*
 - Maximum starting and operating torques 3 Ncm*
- *depends on device: see product pages!

Application	Examples of use	Benefits
Rail-guided systems 	Direct measurement of the guided element.  e.g., heavy duty column lifts, gantry cranes, CT patient tables ...	■ Little space required ■ Little assembly effort
Hydraulic cylinders 	In combination with piston-guided systems or hydraulic cylinders, wire-actuated encoders use the deflection of these systems to gather length information.  e.g., presses, lifter tables, bending machines ...	■ Little space required ■ Mechanical tolerances do not influence measuring accuracy
Telescope-like systems 	In combination with telescope-like systems, wire-actuated encoders can be ideally integrated and are also protected from environmental impact.  e.g., mobile cranes, vehicle hoists ...	■ Do not require guiding ■ Mechanical tolerances do not influence measuring accuracy
Chain, crane and cable winch adjustment 	Direct position feedback after winch adjustment. The wire-actuated encoder can be positioned outside danger or humidity areas by means of wire extension.  e.g., forklifts, stage control systems, elevators ...  Or crane technology ...	■ Chain/wire tears are detectable ■ Mechanical tolerances do not influence measuring accuracy

page 8

Profile

- Robust design
- Measuring lengths up to 3000 mm
- Wire-actuated encoder for rotary encoder with 58 mm servo-flange
- Variable mounting options
- Lockable ventilation holes against condensation
- Very robust measuring rope (stainless steel)
- High tightness at the rope outlet

3.2

Mechanical data

Feature	Technical data	Additional information
Housing	zinc die-cast, plastic	
Wire design	ø0.87 mm	steel wire (stainless), plastic coated
Extension force	≥3 N	
Measured distance/ rope drum revolution	200 mm	
Weight	~0.35 kg	

Electric data

Rotary encoders suitable for the SG31 are featured in RotoLine catalogue 2. Depending on the output signals the following are suitable for...

- Analog outputs such as current or voltage: AV58M
- Incremental outputs: IV58M
- Absolute outputs: WV36M/SSI, WV36M/CAN

The technical specifications for these devices are given in the respective data sheet. A number of transmitter versions of various manufacturers can also be used.

System data

Feature	Technical data	Additional information
Repeat accuracy	± 0.15 mm	per direction of approach
Travel speed	≤ 800 mm/s	

Ambient conditions

Feature	Technical data	Additional information
Ambient temperature	$-40 \dots 80$ °C	

Hint for mounting

When securing the wire it must be ensured that the wire is straight and vertical in relation to the wire outlet. Recommendation: Only select the starting position after an unwound length of approx. 5 mm. This prevents the wire hitting the end stop when it is rewound.

symbolic depiction

3.2

Extension length/measuring range

SIKO wire-actuated encoders achieve the maximum measuring accuracy when the entire wire length (measuring range) is only wound onto the drum in one layer. On the SG120 the wire diameter is selected so that when the first drum layer is used, a maximum measuring range of 6000 mm is possible. The larger diameter of the plastic sheathed steel wire and the Paraline require more space. The result is a correspondingly shorter measuring range. If a lower measuring accuracy is acceptable, two to three layer winding is also possible, and the possible measuring lengths change accordingly.

Extension lengths SG120	1st layer	2nd and 3rd layers
Steel wire	6000 mm	12000 mm
Steel wire, plastic-coated	4000 mm	8000 mm
Paraline	2800 mm	5600 mm

dimensions refer to millimeters

Guide roller UR page 62
Wire extension piece SV page 63

Additional information:
General information and areas of application page 8

Profile

- Wire-actuated encoder with a freely programmable electronic digital display
- Linear distance measurement up to 1000 mm
- Long battery life
- Easy battery change without dismantling of the device
- LCD display with 5 digits and special characters
- Digit height approx. 8 mm
- Flexible mounting position
- Easy mounting

3.2

Mechanical data

Feature	Technical data	Additional information
Housing	plastic	
Wire design	steel wire (stainless steel) $\varnothing 0.36$ mm	plastic coated
Extension force	≥ 3 N	
Weight	~ 0.06	

Electrical data

Feature	Technical data	Additional information
Battery	lithium coin cell, 3 V, CR2477 type	~8 years service life
Display/display range	5-digit LCD 7-segment, ~8 mm height	-19999 ... 99999

System data

Feature	Technical data	Additional information
Repeat accuracy	±0.15 mm	
Travel speed	≤800 mm/s	

Ambient conditions

Feature	Technical data	Additional information
Ambient temperature	-10 ... 60 °C	
Storage temperature	-30 ... 80 °C	
EMC	EN 61000-6-2 EN 61000-6-4	interference resistance / immission electromagnetic emission
Protection category	IP50	EN 60529

Order

Ordering table

Feature	Ordering data	Specification	Additional information
Version	02	A downward wire extension	
	04	A horizontal wire extension	
Measuring range	1000	B 1000 mm, resolution 1 mm	
	1000.0	B 1000 mm, resolution 0.1 mm	
	40.0	40 inch, resolution 0.1 inch	
	40.00	40 inch, resolution 0.01 inch	
Counting direction	e	C ascending with wire extension	
	i	C descending with wire extension	
Key pad operation	D	D direct zeroing	
	V	D zeroing delayed by 5 s

3.5

Profile

- For changing the measurement direction. Guide rollers are used when the wire-actuated encoder cannot be installed inline with the extension direction of the wire
- Several guide rollers can be combined

Mechanical data

Feature	Technical data	Additional information
Material	plastic	roller
	aluminum	accommodation
Weight	0.025 kg	

Order

- **Mounting example**
(See page 11)
- **Order key**
UR

Scope of delivery: UR

Profile

- For extending the measurement wire or bridging the gap to the object to be measured. This does not extend the actual measurement range of the encoder, however
- Easy mounting

3.3

Order

■ Ordering table

Feature	Ordering data	Specification	Additional information
Wire length	... A	0.1 ... 20 m, in steps of 0.1 m	
Wire design	SK B	steel rope, plastic-coated	
	P	Para-line	

■ Order key

SV - -
A B

Scope of delivery: SV, User information

Profile

- For easy mounting of rotary encoders to SG21
- For rotary encoders with max. $\varnothing 40$ mm
- Diverse variants available
- Basic version (DIY) for own adjustments

Mechanical data

Feature	Technical data	Additional information
Material	aluminum	

Hint for mounting

Mount the mounting flange [1] directly on the encoder flange [2]. After mounting the self-aligning coupling [3] on the encoder shaft, place the rotary encoder with flange and coupling on the cable housing [5]. Screw the flange to the housing and fasten the coupling through the lateral hole on the drum shaft of the cable. The plastic cover [4] prevents foreign bodies from entering the cable housing.

For detailed instructions regarding encoder mounting refer to the user information of the SG21 wire-actuated encoder

Order

■ Ordering information

one or more system components are required:

Absolute encoder WV36M/CAN
Absolute encoder WV36M/SSI
Incremental encoder IV28M/1
Wire-actuated encoder SG21

■ Ordering table

Feature	Ordering data	Specification	Additional information
Flange type	IV28M/1	for IV28M/1 rotary encoder	
	WV36M/SSI A	for WV36M/CAN and WV36M/SSI rotary encoders	
	HE	for rotary encoder with bolt circle ø30 mm	
	DIY	processing of the flange for the encoder by the customer	

■ Order key

ZB4002 -

A

Scope of delivery: ZB4002, fastening screws for flange and encoder

Profile

- Mating connector, straight
- Mating connector, offset
- D-SUB connector
- Bus terminator, straight

When screwed, the distance to the device will increase by approx. 3 mm.

Protection classes according to DIN EN 60529

IP ..

Touch and foreign bodies protection			Water protection		
	0	No protection.		0	No protection.
	1	Protected against access with the back of the hand. Protection against solid foreign bodies with $\varnothing > 50$ mm.		1	Protection against vertical water drips.
	2	Protected against contact with a finger. Protected against solid foreign bodies with diameters > 12.5 mm.		2	Protection against vertical water drips if the housing is tilted up to $\pm 15^\circ$.
	3	Protected against access with a tool. Protected against solid foreign bodies with diameters > 2.5 mm.		3	Protection against spray up to $\pm 60^\circ$ towards verticality.
	4	Protected against access with a wire. Protected against solid foreign bodies with diameters > 1.0 mm.		4	Protection against splash water coming from any angle.
	5	Full protection against contact. Protection against harmful quantities of dust.		5	Protection against hose water (nozzle) coming from any angle.
	6	Full protection against contact. Dust-proof.		6	Protection against strong hose water coming from any angle.
				7	Protection against temporary immersion.
				8	Protection against continuous immersion.
				9k*	Protection against ingress of water during high pressure or steam-jet cleaning, specific for road vehicles.

 The standards deal with the protection of electric equipment by means of housings, covers and so forth. For purely mechanical devices, the information is used figuratively.

 The two numbers are not indicative of the protection against ingress of oils or similar liquids. The second figure indicates the protection class exclusively for water.

* IPx9k is not part of DIN EN 60 529, rather it is contained in DIN 40 050
